

USER GUIDE - LEGALEASE

LegalEase System

Prepared for project submission

This document provides a short user guide for the main functions of the LegalEase website. It is written based on the current frontend and backend implementation of the group project.

1. Introduction

LegalEase is a web-based legal service platform. The system helps users search for lawyers, view lawyer profiles, book appointments, manage schedules, and receive updates from the system.

This guide explains the main functions of the website in a simple way so that users can quickly understand how to use the system.

2. Home Page

When the website opens, the user can see the Home page. The top navigation bar contains the main menu such as Home, Search lawyer by Location, View Lawyer List, FAQ/Question List, and News.

If the user has not signed in yet, the system shows the Signin and Register buttons. The Home page also displays a banner area and a section that introduces approved lawyers on the system.

3. Register and Login

To create a new account, the user clicks Register and fills in name, email, phone number, password, and password confirmation. After that, the user clicks Submit to complete registration.

To sign in, the user clicks Signin and enters email and password. After successful login, the system loads the correct functions based on the user role.

4. Search Lawyer and View Profile

Users can search for lawyers by location from the navigation bar or open the View Lawyer List page. On the lawyer list page, users can sort by highest rated or most experienced, and can narrow results by practice area.

When the user clicks View Profile, the system opens the lawyer detail page. This page shows lawyer information such as image, rating, city, years of experience, specialization, working hours, and client reviews.

5. Appointment Function

If a customer wants to meet a lawyer, the customer can click Make Appointment. The appointment page shows lawyer information, available schedule, and a request content box.

The customer selects an available time slot, enters request content, and clicks Submit. After that, the appointment appears in My Appointment, where the customer can check status, view responses from the lawyer, reschedule, or cancel the appointment when needed.

6. Join as Lawyer

If a signed-in customer wants to become a lawyer on the system, the customer opens the profile menu and clicks Join as lawyer. The system opens a lawyer application form.

This form includes Address, Years of Experience, Card Number, City, License Number, Document Image, and Specializations. After the form is submitted, the application waits for admin review. The account is only upgraded after admin approval.

7. Lawyer Area

Lawyer accounts use a separate lawyer module. After lawyer login, the lawyer can access Dashboard, Profile, Specializations, Availability Slots, and Customer Appointments.

The Dashboard shows verification status, years of experience, number of specializations, number of available slots, and booked slots. The Profile page allows the lawyer to update profile information. The Specializations page allows the lawyer to choose practice areas. The Availability Slots page allows the lawyer to create, edit, and delete working time. The Customer Appointments page allows the lawyer to view appointment details, respond to customers, confirm completed appointments, or cancel bookings.

8. Admin Area

The admin module contains Lawyer Management, User Management, Appointment Oversight, FAQ Management, and System Notification.

In Lawyer Management, the admin can search, filter, and review lawyer information. The admin can also approve, reject, or keep a lawyer application in pending status. This function is important because Join as lawyer requests are processed here.

9. Conclusion

LegalEase supports three main roles: customer, lawyer, and admin. Each role has a different set of functions, but all of them are connected through one complete legal service workflow.

Users should sign in with the correct account type in order to access the correct pages and system functions.
